

The background of the slide is a photograph of a blue metal safe. The safe has several silver-colored metal padlocks attached to its door. The padlocks are of different sizes and are arranged in a row. The safe's surface has a textured, slightly grainy appearance. The lighting is soft, highlighting the metallic sheen of the padlocks and the blue color of the safe.

Sustainability data 2024

Sustainability data 2024

Reporting of Safestore's sustainability indicators based on the EPRA guidelines and supporting information, methods and assumptions behind the Sustainability information presented in the Safestore 2024 Annual Report.

EPRA Performance Measures

Safestore reports the company's sustainability indicators based on the EPRA (European Public Real Estate Association) latest recommendations (*EPRA Sustainability Best Practices Recommendations Guidelines, Third Version September 2017*). Safestore reports sustainability indicators for the majority of the 28 EPRA sBPR Performance Measures covering energy consumption, greenhouse gas (GHG) emissions, water, waste and social and governance indicators.

EPRA Overarching Recommendations

Organizational boundaries

Safestore limits its reporting to properties under its operational control. Properties where other parties are responsible for contracts relating to energy supply, water and waste removal are therefore excluded.

Coverage

Safestore endeavors to access and compile data for the properties owns and operates. Safestore enjoys good access to data for the majority of the store portfolio; the proportion of properties included is presented with each indicator. There are however instances where Safestore does not enjoy access (or timely access) to relevant data, typically when properties are newly built, acquired or disposed from the portfolio. Waste disposal data is a particular challenge because suppliers do not usually provide data at a sufficiently granular level which would allow reporting on a LFL basis.

Estimation of landlord-obtained utility consumptions

It is sometimes necessary to estimate consumption data for stores where data is unavailable. This basis for estimation is applying the average consumption intensity from the rest of the portfolio for which data is available.

Normalisation

Intensity indicators based on floor area (square foot) are provided for energy, GHG and water in the respective sections of the data

Segmental analysis

All data is for one property type (self storage facilities) so segmental analysis by type is not appropriate. Where possible, data is provided separately for the UK and France portfolios.

Third party assurance

Safestore' Sustainability Report (within the Strategic Report) is reviewed by Deloitte LLP as part of the Annual Report. See independent auditor's report, Annual Report 2024 p127-128 for a public assurance statement.

Disclosure on own offices

Data for Safestore Head Office is reported within the data for the Borehamwood location which is co-located with the Head Office
